

# Residential Energy Storage Incentives

PowerShift by NV Energy offers incentives to help offset the cost of installing residential solar-integrated energy storage systems from 4 kW up to 100 kW capacity. Residential customers who have installed or are going to install a renewable energy system, like rooftop solar, are eligible. The benefits of installing energy storage systems include:

- The ability to store extra energy produced by your solar system during the day means you'll have plenty to use when your solar system is not producing, like when there are clouds or at night.
- Your battery and solar system may allow you to operate certain loads for a limited amount of time if the grid is not available due to an unforeseen event such as extreme weather.

## Time-of-Use Rates

Customers who are willing to use less electricity during periods when the total demand of energy is highest will save money by shifting their usage to times with lower rates. Customers who are on a time-of-use (TOU) rate plan receive a higher energy storage incentive amount.

NV Energy offers a Guaranteed Lowest Rate for customers if they are on the TOU rate for at least 12 months. If after the first 12-month period we find that you have spent more on the TOU rate than you would have spent on the standard rate, we will refund the difference and restore you to the standard rate (if you choose).

## Incentive Amounts

Energy Storage Size	Incentive Amount
Less than 100 kW with TOU rate	Lesser of \$0.19 per Wh, 50% of equipment costs or \$3,000*
Less than 100 kW without TOU rate	Lesser of \$0.095 per Wh, 50% of equipment costs or \$1,500*

\*Incentive cap per premise
